

JODISIUS

The AI Operating System for small business.

Every business has employees.
Some are human. Some are software.

Jodisius creates intelligent digital employees.

Small businesses leak revenue every day

Calls ring out

Every missed enquiry is a sale that went to whoever answered.

Leads go cold

Follow-up is the first job dropped when humans run out of hours.

Expertise doesn't scale

The owner is the only one who truly knows the business — and there's one of them.

THE INSIGHT

AI employees are coming. Ours arrive already trained.

EVERYONE ELSE

“An AI receptionist”

- Answers the phone
- Takes a message
- Books an appointment

JODISIUS

“An AI insurance advisor”

- Understands insurance
- Applies underwriting rules
- Asks the right health questions
- Recommends carriers, produces quotes
- Warm-transfers with a full briefing

One operating system. Installable expertise.

JODISIUS OS

Voice · Memory · Knowledge · Actions · Scheduling · Messaging · Payments · Marketplace · Billing · Multi-tenant deployment

INDUSTRY ENGINE

Underwriting logic · domain doctrine · workflows · compliance rules · conversation library
— months of expertise, installed like software

AI EMPLOYEE

Ronnie, and colleagues to come — reception, sales, support, concierge. Same employee; the engine makes the expert.

LIVE TODAY

The Insurance Engine — built, deployed, working

Underwriting Engine

Carrier Recommendation

Quoting Engine

Medication Intelligence

Condition Intelligence

State Rules

Final-Expense Doctrine

Conversation Library

Sales Process

STATUS: live insurance deployments • multi-tenant • voice • billing • marketplace — an operating platform, not a prototype

One sentence in. A booked appointment out.

CALLER

*"I'm 72, diabetic, on Metformin and Eliquis.
Looking for \$15,000."*

- ✓ Understands both medications
- ✓ Applies underwriting rules
- ✓ Selects eligible carriers
- ✓ Produces the quote
- ✓ Books the appointment
- ✓ **Warm-transfers the agent — with a briefing**
- ✓ **Lead alert email lands in the owner's inbox — seconds later**

Not a generic LLM answering questions — an employee backed by an Industry Engine.

Every industry becomes an installable engine

Insurance ✓ LIVE

Real Estate

Law

Hospitality

Attractions

Healthcare

Automotive

Retail

Ronnie stays the same. Only the engine changes.

Anyone can connect an LLM to a phone. Very few have spent months building underwriting logic, doctrine, knowledge packs and industry workflows into the employee. That is where defensibility starts.

Jodi Barman — Founder / CTO

Built alone:

- ✓ The Jodisius operating platform
- ✓ Live insurance deployments
- ✓ Multi-tenant architecture
- ✓ Voice AI, marketplace, billing
- ✓ Commerce & payments rails
- ✓ The complete Draculaverse digital experience →

Not because Jodisius sells websites — because that's what happens when the founder points the platform at a problem.

Draculaverse: a complete commerce, booking and media operation — one founder, days, no agency.

Not a rescue. An acceleration.

*“I’m not looking for someone to rescue an idea.
I’m looking for a partner to accelerate a working platform.”*

Capital

Fund engine development and go-to-market for the next two verticals.

Strategy

Vertical selection, pricing, and the build-vs-partner map.

Network

Doors into the industries where engines land next.

Structure open: investment, strategic partnership, or build-together — sized with the right partner.

Jodisius doesn't build chatbots.

**We build Industry Engines that give AI employees
genuine domain expertise.**

Insurance proved the model. Every new industry is another installable engine.
